Intelligent Fleet
with Sirius Basis

A robust bottom line with Sirius

Sirius is a unique tool that can help you improve your bottom line with precise GPS data 24 / 7 for all your vehicles. This will help you reduce a number of administration tasks across your business.

Everything is linked together in a stable system, which gives you a clear view of your fleet on your PC or Smartphone. A simple click of the mouse gives you access to useful information that can be used for billing and other documentation.

YOUR BENEFITS:

Control your fleet and its current utilisation.

> See where your fleet is in real time and dispatch the closest vehicle to a customer with a realistic ETA.
> Replay the driven routes for future planning and optimisation.
> Find out when and where your fleet has been active.
> Track time spent at each customer and bill accordingly.
> See how your vehicle is being treated on a daily basis.
> Trace your stolen vehicle immediately.
> Vehicles are tracked all over the EU + Norway.

Easy access to data that will simplify your administration

> Pull reports on utilised routes, customer stops and time stamps for simple and accurate customer invoicing.

> Define zones and pull data from vehicles which have been in a geographic zone within a given time frame. For example this would give invoicing data for large construction projects with lots of vehicles on and off building sites.
> Connect crane sensors, PTOs, door sensors and anything else that will document the use of equipment with both time and GPS positioning stamps.
> Use Sirius to prove vehicle speed, accurate time stamps for delivery, arrival and time spent at each location. This is also an excellent way to confidently confirm or deny customer claims.

Foster colleague accountability and self-discipline among the drivers

> Se a clear reduction in unauthorised driving.
> Increased awareness around vehicle idling and vehicle speed.
> Increased awareness of contract fulfilment and customer satisfaction.

A stable and forward thinking solution

> After implementation the equipment is updated remotely.
> Sirius has a 99% uptime.
> The subscription includes fixed rate data traffic irrespective of your geographical location.
> Sirius can be upgraded to include driver profiling, the key to enabling further fuel saving measures.

Increased safety for your employees

Your vehicle data are made readily available and your invoicing is made easier.

Define geographic zones and pull data on all your vehicles movements and stops. This is essential for documentation and invoicing.

Dispatch the closest vehicle to a task or use the system to inform your customer when they can expect you.
