

Better & Greener financial performance with Sirius Plus

Sirius is a unique management tool that makes it simple to improve operating efficiency and to follow up your driver's behavior behind the wheel, through graphical and easily understandable reporting tools. Sirius ensures that your business gets the best start when you use the system in tandem with our consultants and training support team. System consulting, training and data transfer costs are of course included in the operating subscription. With Sirius, your company gets an intelligent fleet management system with much more.

Increased road safety and fewer injuries

Sudden braking, hard acceleration or hard cornering is instantly recorded and communicated to the driver and the company. This improves the driving behaviour over time, improves profitability and reduces the risk of accidents on the roads. The real cost of a personal injury will always include more than the direct cost of the damage. There is also the indirect and peripheral knock on costs. These are often difficult to calculate because they can have a huge impact on both your business and your employees.

Better Financial performance

With Sirius, the company's drivers can cut fuel consumption by between 5 and 10%. At the same time, there is less wear & tear on brakes, tires, clutch and engine parts. Your vehicle's life span is extended and service costs will be reduced. The amount of mechanical data such as fuel consumption, idling and other mechanical data that can be accessed by connecting to your vehicle's CAN-bus / engine computer depends on the vehicles model, year and build date.

Lower insurance premiums

A calmer driving style will result in a safer working environment and more satisfied employees. When Injuries are prevented and overall risk is reduced your company is more attractive to insurance providers and this will often result in lower insurance premiums

Reduced environmental impact

Lower fuel consumption means less CO₂ emissions. Calculations show that a single vehicle can reduce CO₂ emissions by up to 7.5 tons per year. In short Sirius gives a pleasurable & green driving experience.

Added benefits

- > More economical fuel consumption
- > Reduced environmental impact
- > Less vehicle damage
- > Management tool to guide your drivers
- > Anti-theft and access to professional call centres
