See what you can get from your Traffilog solution

In the coming years, there will be a greater focus on road safety, and in particular a focus on the contribution that technology can make to improve road safety. Also with Traffilog's new security features safety priorities will remain a continual focus.

In this newsletter you can read about the new app features and solutions that we have arrived at with your valuable feedback. We believe this product now better responds to the needs and potential situations that can occur in everyday operations. If you are in the passenger transport sector, then in future we have a one stop shop for you.

UPDATED SIRIUS APP

If you do not already have our new app then just download it from the app store. The app gives you a richer visual experience with significantly greater performance. You will get the familiar, functional features and the new app will soon offer a service case function where you can create service cases on a tablet device.

The service case function is the first step to continuously strengthening coherence between the fleet management system and the operation, so that you keep getting enhanced and customized ways to automate, analyse, optimize and make sure you're an even better business with the Sirius fleet management app. If haven't already downloaded the app then you can do it here:

The perfect signal value:

IGNITION INTERLOCK

– THE BEST WAY TO REDUCE ACCIDENTS

In recent years, there has been greater focus on traffic safety. One of the keys to reducing accidents and saving lives is to ensure that people under the influence of alcohol do not put themselves behind the wheel. It is that simple.

Traffilog now offers an "ignition interlock", as an accessory to our solution to prevent injury to people as well as prevent damage to vehicles caused by drunk driving. In addition to great value you get:

- The choice between a fixed or wireless solution
- Three year full guarantee on lock and access to technical support
- You can store and include data in the weekly and monthly reports

Unique feature that allows for greater flexibility

"Ignition interlock" is fully integrated to the fleet management and driver profile tools. This means that you get a unique flexibility, where the operations manager can release a vehicle to drive if the driver has forgotten or lost his mouth piece. The operations manager may also require an additional blow sample from the driver if a passenger has reported a suspected intoxicated driver.

This function is totally unique and a feature that has been especially developed based on your feedback. This will in turn enable you to better respond to all kinds of operational challenges.

All events around the "Ignition interlock" will be immediately posted as an alarm to a specified person or place and will be included in all reports.

BUS? NOW TRAFFILOG CAN BE YOUR **ONE STOP SHOP**

Imagine you can see everything that is going on in your buses throughout the city, and indeed throughout the world. Which ones are running, and which ones are running on time and *en route*? Are the passengers safe and how many are there on board?

And imagine that the most important real time data will be made available to passengers in a convenient app and to the signs at bus-stops. Not to mention a payment solution for good measure. [Traffilog now has it all in one solution](#), so you only have one place to go if you want to give yourself the best chance of keeping your business healthy, successful and in high regard.

If you are interested in learning more about the new initiatives or solutions from Traffilog, please contact our International Key Account Manager, Charlotte Schönemann-Paul at +45 6190 9010 or via mail: charlotte.schonemann@traffilog.dk
